CC regine This sequence represents a human H11 monoclonal antibody single chain V region fragment (H11-scFv) construct which is capable of forming monomers. This construct is used to determine the ability of H11-scFv antibody fragments to bind specifically to the C-antigen on cancer cells. Such antigen binding fragments may be used for treating a patient with neoplasia. It is especially useful in the detection of lymphomas and leukaemias where the tumour cells bearing the C antigen are circulating in the patients bloodstream. The polynucleotide sequence may be used as a primer or a probe and the encoded protein may be used in a vaccine or for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is human monoclonal antibody (Mab), H11-single chain CC variable region (scFv). The H11 light chain variable region is linked to CC the heavy chain variable region through a (SGGGG) 3 linker to form CC monomers. The invention relates to human monoclonal antibody (Mab) H11, CC H11-(scFv) single chain variable (V) region fragment and their CC corresponding DNA molecules. H11 antibody is an immunoglobulin of IgM CC subclass which is specific to C-antigen found specifically on neoplastic CC cells and not on normal cells. H11 is an antibody obtained from the CC fusion of peripheral blood lymphocytes of a 64 year old male with a low CC grade glioma and fused to a human myeloma cell line to produce a CC hybridoma designated NBGM1/H11. A pharmaceutical composition comprising CC H11 and its designated NBGM1/H11. A pharmaceutical composition comprising CC treatment of neoplastic disease, particularly, melanoma, breast CC carcinoma, lung carcinoma, ovarian carcinoma, colon carcinoma, gastric CC carcinoma, prostate carcinoma, prostate carcinoma, prostatic adenocarcinoma, colon carcinoma, and can etherany CC carcinoma and can etherany carcinoma and charactinoma and charactinoma and charactinoma and carcinoma and charactinoma and carcinoma and carci

                                                                                       Ś
                                                                                                                                                                                                                        The invention relates to a polypeptide which is an antigen binding CC fragment of a monoclonal antibody specific for an antigen detected on neoplastic cells. The antigen binding fragment (ABP) is useful for treating a patient with a neoplasia. The individual has a clinically detectable tumour. The method is useful for palliating the neoplasia. The cc method reduces the risk of recurrence of a clinically detectable tumour. The method is useful for palliating the neoplasia. The cc matigen binding fragment is labelled with a therapeutic moiety such cc and/or treating neoplasias, including melanoma, neuroblastoma, glioma, cc soft tissue sarcoma and small cell lung carcinoma. The polypeptide is useful for treating and imaging composition is useful for eliciting an immune response against neoplasia. The polymuclactide is useful for manufacturing novel reagents and for treating and imaging composition is useful for eliciting an immune response against neoplasia. The polymuclactide is useful in expression systems for the production of crobes to assay for the presence of alphaC polymuclactide or related compositions in a sample, as primers to effect amplification of desired polymuclactides and in pharmaceutical compositions including vaccines and for gene therapy. The polymuclactide is also useful for genetically ally all treating cancer, including therapy of cancer and prophylactic care, particularly for decreasing the risk of recurrence. The present sequence crepresents the amino acid sequence of the human C-antigen specific antibody HII sincle chain variable region fragment.
                                                                                                                      Matches
                                                                                                                                                       Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel antigen binding fragment of monoclonal antigen detected on neoplastic cells, useful cancer, for manufacturing novel reagents and

Composition useful for treating neoplasia in patient, comprises antigen binding fragment of antibody specifically recognizing C-antigen recognized by antibody comprising H chain V region and L chain V region V region

Claim 5 ID NO 14; 56pp; English.

The invention relates to a composition comprising an antigen binding fragment of an antibody comprising H chain V region and L chain V region that specifically recognises C-antigen. The invention is useful for treating a patient with a neoplasia. The antigen binding fragment of the antibody is used as diagnostic and imaging reagents. The invention is useful for genetically altering cells in vivo, to treat various types of cancer. It is also useful in vaccine and gene therapy. The present sequence is human antibody H11 single chain V region fragment (scFv).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         fragments to bind specifically to the C-antigen on cancer cells. Such antigen binding fragments may be used for treating a patient with neoplasia. It is especially useful in the detection of lymphomas and leukaemias where the tumour cells bearing the C antigen are circulating in the patients bloodstream. The polynucleotide sequence may be used as a primer or a probe and the encoded protein may be used in a vaccine or for gene therapy. The human monoclonal antibody (WAb), designated HII, specifically recognises cancerous cells. HII is specific for glioblastoma, neuroblastoma, malignant melanoma, breast adenocarcinoma and the specific specifically recognises cancerous cells.
                                                                                                                                                                                                    US6207153-B1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is human monoclonal antibody (Mab), H11-single chain CC variable region (8cFv). The H11 light chain variable region is linked to CC the heavy chain variable region through a (8cGcG)3 linker to form dimers. CC The invention relates to human monoclonal antibody (Mab) H11, H11 (8cFv) CC single chain variable (V) region fragment and their corresponding DNA CC molecules. H11 antibody is an immunoglobulin of IgM subclass which is CC specific to C-antigen found specifically on neoplastic cells and not on CC normal cells. H11 is an antibody obtained from the fusion of peripheral CC blood lymphocytes of a 64 year old male with a low grade glioma and fused CC to a human myeloma cell line to produce a hybridoma designated NBCM1/H11. CC A pharmaceutical composition comprising H11 and its derivatives are CC useful in the diagnosis, imaging and treatment of neoplastic disease, CC particularly, melanoma, breast carcinoma, lung carcinoma, ovarian CC carcinoma, colon carcinoma, pastric carcinoma, prostate carcinoma, CC lymphoma carcinoma, neuroblastoma, glioma, soft tissue sarcoma, small CC cell lung carcinoma, prostatic adenocarcinoma, B and T cell lymphomas and CC chronic leukaemias. H11 DNA is also used in vaccines and gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Query Match

The invention relates to a polypeptide which is an antigen binding CC fragment of a monoclonal antibody specific for an antigen detected on CC meoplastic cells. The antigen binding fragment (ABF) is useful for treating a patient with a neoplasia. The individual has a clinically CC detectable tumour. The method is useful for palliating the neoplasia. The method reduces the risk of recurrence of a clinically detectable tumour. The method is useful for palliating the neoplasia. The companion of a radioisotopes or immunomodulators. ABF is useful for detecting C-cantigen in a sample. The polypeptide is useful for detecting localising and/or treating neoplasias, including melanoma, neuroblastoma, glioma, CC soft tissue sarcoma and small cell lung carcinoma. The polypeptide is useful for manufacturing novel reagents and for treating and imaging composition is useful for eliciting an immune response against neoplasia. The polymucleotide is useful in expression systems for the production of composition is useful for eliciting an immune response against neoplasia. The polymucleotide is useful or alphac, as hybridisation of cantigen specific antibody, termed HII or alphac, as hybridisation of composition is useful for planarestic and polymucleotide or related sequences in a sample, as primers to effect amplification of desired golymucleotides and in pharmaceutical compositions including vaccines and for gene therapy. The polymucleotide is also useful for genetically called the radio of cancer. The present sequence of articularly for decreasing the risk of recurrence. The present sequence corposets the amino acid sequence of the human C-antigen specific antibody HII single chain variable region fragment, scFv, #2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel antigen binding fragment of monoclonal antibody specific antigen detected on neoplastic cells, useful for diagnosing or cancer, for manufacturing novel reagents and as diagnostic and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         neoplasia; tumour; recurrence risk; C-antigen; melanoma; neuroblastoma; glioma; soft tissue sarcoma; small cell lung carcinoma; brain cancer; C-antigen specific antibody; alphaC; cancer; vaccine.

The invention relates to a composition comprising an antigen binding fragment of an antibody comprising H chain V region and L chain V region that specifically recognises cantigen. The invention is useful for treating a patient with a neoplasia. The antigen binding fragment of the antibody is used as diagnostic and imaging reagents. The invention is useful for genetically altering cells in vivo, to treat various types of
                                                                                                                                                                                                      Composition useful for treating neoplasia in patient, comprises antigen binding fragment of antibody specifically recognizing C-antigen recognized by antibody comprising H chain V region and L chain V region
                                                                                                                                                                                                                                                                                                                N-PSDB;

```
CC screening a molecule comprising the antigen-binding portion of an antibody which blocks ligand-dependent activation of RPTK; (6) an CC isolated nucleic acid molecule encoding a VL-CDR3 DNA region and a VH-CC CDR3 DNA region; (7) an isolated nucleic acid molecule encoding VL region and a VH region; (8) vectors comprising a nucleic acid molecule of (6) or CC (7); and (9) host cells transformed with the vector. (I) have CC osteopathic, cytostatic and ophthalmological activities, and can be used as a RPTK inhibitor. Compositions comprising (I) are useful for treating CC bone and cartilage disorders, including skeletal disorders such as CC skeletal dysplasia (achondroplasia, thanatophoric dysplasia, achondroplasia with developmental delay and CC hypochondroplasia, severe achondroplasia with developmental delay and CC acanthosis nigricans dysplasia) or a craniosynostosis disorder (e.g. Muenke coronal craniosynostosis or Crouzon syndrome with acanthosis configricans). The composition may also be used for treating or inhibiting CC malignant cell proliferative disease or disorder associated with abnormal CC myloma), solid tumours (e.g. mammary, colon, cervical, bladder, primary crousers of the configricans of primary colon, cervical, bladder, primary colorectal, chondrosarcoma or osteosarcoma).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         tumours, tumour progression (particularly progression of transitional cell carcinoma or mammary carcinoma), or tumour metastasis, where the cell proliferative disorder may be associated with the action of a constitutively activated RPTK, or with ligand-dependent activation of RPTK. The compositions may further be used for treating hyperproliferative diseases and disorders associated with ligand-dependent FGFR signaling, such as vision disorders (e.g. neovascular glaucoma, macular degeneration and proliferative retinopathy including diabetic retinopathy), and non-neoplastic angiogenic pathologic conditions (e.g. haemangiomas, angiofibromas and psoriasis). The present sequence is given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          affinity for a receptor protein tyrosine kinase (RPTK), particularly for a fibroblast growth factor receptor (FGFR), and which blocks constitutive activation of an RPTK. Also described: (1) pharmaceutical compositions comprising (I) as an active ingredient and a pharmaceutical carrier, excipient, or auxiliary agent; (2) a kit comprising (I), at least one reagent for detecting the presence of (I) when bound to the RPTK, and instructions for use; (3) a method for treatment of bone and cartilage related disorders by administering a composition of (1) to the subject; (4) a method for treating or inhibiting a cell proliferative disease or disorder by administering the composition of (1); (5) a method for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention describes a molecule (I) comprising the antigen binding portion of an isolated antibody which has specific binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   proliferative diseases.

```

CC specifically recognising two regions of the beta-A4 peptide/Abeta4. The Cfirst region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-CC Ser-Gly-Tyr AbA8986 or its fragment, and the second region comprises the amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Ala-Glu-Asp-Val-CC amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-CC concoding (I); (2) a vector comprising the nucleic acid of (1); (3) a host Ccll comprising the vector of (2); (4) preparing (I), comprising CC culturing the host cell of (3) under conditions that allow synthesis of (C) and recovering (I) from the culture; (5) a composition comprising (I) cor an antibody molecule produced by method (4); (6) a kit comprising (C); (8) testing the resulting Fab optimised clones; (1) optimising CC (1); (8) testing the resulting Fab optimised clones; (1) expressing CC (1); (8) testing the resulting poptimised clones; (1) expressing CC of selected, optimised clones; (1) preparing a pharmaceutical composition, comprising optimisation of (I), and formulating the comprising optimisation prepared by method (8). (1) has The present invention describes an antibody Disclosure; Page 251-254; 312pp; English. molecule (I) capable of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   used in gene therapy. The antibody molecule (I), nucleic acid molecule, vector or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with amyloidogenesis and/or amyloid-plaque formation. The antibody molecule may also be used in preparing a diagnostic composition for the detection of the disease mentioned above. The antibody is used for the disease to beta-amyloid plaques or for passive immunisation against beta-amyloid plaque formation. In particular, the disease is dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, Creutzfeldt Jacob disease, hereditary cerebral haemorrhage with amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.

amyloidosis Dutch type, Parkinson's disease, HIV-related dementia, amyotrophic lateral sclerosis or neuronal disorders related to aging. The present sequence is used in the exemplification of the present invention.

```
CC specifically recognising two regions of the beta-A4 peptide/Abeta4. The CF first region comprises the amino acid sequence Ala-Glu-Phe-Arg-His-Asp-CC Ser-Gly-Tyx Ala89886 or its fragment, and the second region comprises the amino acid sequence Ala-Glu-App-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-CC amino acid sequence Val-His-His-Gln-Lys-Leu-Val-Phe-Phe-Ala-Glu-Asp-Val-CC Gly Ala89887 or its fragment. Also described: (1) a nucleic acid molecule cell comprising the vector of (2); (4) preparing (1), comprising CC culturing the host cell of (3) under conditions that allow synthesis of CI and recovering (1) from the culture; (5) a composition comprising (1) or an antibody molecule produced by method (4); (6) a kit comprising (1), CC mucleic acid of (1), vector of (2) or host cell of (3); (7) optimising (1), CC mucleic acid of (1), vector of (2) or host cell of (3); (7) optimising (1), CC mucleic acid of (1), vector of (2) or host cell of (3); (7) optimising (2) of selected, optimised clones; (11) preparing a pharmaceutical composition, comprising optimisation of (1), and formulating the composition, comprising optimisation of (1), and formulating the composition prepared by method (8). (1) has curroprotective, nootropic and antiparkinsonian activities, and can be used in gene therapy. The antibody molecule (1), nucleic acid molecule, vector or host is useful in preparing a pharmaceutical composition for the prevention and/or treatment of a disease associated with amyloidogenesis and/or amyloid-plaque formation. The antibody molecule (2) mayloidogenesis and/or amyloid-plaque formation. The antibody molecule of the disease mentioned above. The antibody is used for the detection of beta-amyloid plaque formation. In particular, the disease is C dementia, Alzheimer's disease, motor neuropathy, Down's syndrome, CC dementia, Alzheimer's disease, hereditary cerebral haemorrhage with

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     8
The invention relates to a novel molecule comprising the antigen binding contion of an isolated antibody having a specific binding affinity for a receptor protein tyrosine kinase, and which blocks constitutive activation of a receptor protein tyrosine kinase, such as fibroblast growth factor receptor 3 (RGPR3). The novel molecules of the invention that the following activities: osteopathic, cytostatic, nootropic, neuroprotective, ophthalmological, and antidiabetic. The nucleic acids encoding the novel molecules of the invention can be used in gene therapy to treat disorders. The molecules are useful for treating bone and cartilage related disorders such as craniosynostosis (e.g. Muenke coronal craniosynostosis or Crouzon components) the acontroplasia, thanatophoric dysplasia (TD), hypochonroplasia, severe achondroplasia, thanatophoric dysplasia (TD), hypochonroplasia, severe achondroplasia, thanatophoric dysplasia (TD), hypochonroplasia, severe achondroplasia, cell proliferative disorders, haematopoietic malignancy (e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        antigen binding; receptor protein tyrosine kinase; fibroblast growth factor receptor 3; FGPR3; osteopathic; cytostatic; nootropic; neuroprotective; ophthalmological; antidiabetic; gene therapy; bone; cartilage; craniosynostosis; skelettal dysplasia; cell proliferative disorder; haematopoietic malignancy; hyperproliferative disorder; neurovascular glaucoma; macular degeneration; proliferative retinopathy; diabetic retinopathy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                   New antigen binding portion of an antibody having a specific binding affinity for a receptor protein tyrosine kinase, useful for treating bone and cartilage related disorders, cell proliferative or hyperproliferative
                                                                                                                                                                                                                                                                                                                                                                                   Claim 42; SEQ ID NO 92; 122pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The patent discloses heterominibodies which are multifunctional compounds CC produceable in a mammalian host cell as a secretable and fully functional CC heterodimer of two polypeptide chains, where one of the polypeptide CC chains comprises, a CH1-domain (constant domain of an immunoglobulin CC heavy chain) and the other chain comprises CI domain (constant domain of an immunoglobulin light chain). The polypeptide chains further comprise, CC different receptor or ligand functions, where further at least two of the CI different receptor or ligand functions, where further an another and CI are linked via the constant domains. The heterominibodies have CI cytostatic, immunostimulatory, antileukaemia and antiproliferative activities. These compounds can be used for disgonsing, preventing and CI treating malignant cell growth related to malignancies of haematopoietic CI cells e.g. lymphomas and leukaemias, or to solid tumours e.g. carcinomas, CR melanomas and sarcomas. The present sequence is the left chain of a heterominibody comprising HD70 single-chain Fv (scFv) fragment N-CI terminally linked to human CH1 domain which bears at its C-terminus the human inflammatory cytokine gramulocyte/macrophage colony stimulating CI factor (GM-CSF), plus a hexahistidine sequence for ease of purification. CC molecule (EpCAM) also called 17-1A antigen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δ
